

**GRACE HOSPITAL  
KARANJI, NAVAPUR**

2019 Annual Update

For most of us in North America, it's an ordinary thing to go to the doctor when we're sick or need treatment. It's something we can easily take for granted. But it is not so in India. Some families literally save their money for years just to be able to see a doctor or specialist in Indian villages. Others have to sell their land or worse, take money on high interest rates to be able to go and get medical treatment.

### **What are the most common illnesses treated at medical camps?**

Maybe the tragedy is that millions needlessly suffer and even die from illnesses that can be so easily avoided. Some of the most common diseases in India are curable—even preventable. But many are suffering and dying from these treatable ailments. Diarrhea, malaria, colds, coughs, yellow fever, severe headaches, eye disease, stomach problems, anemia and other diseases are frequently treated at medical camps. Patients with more serious issues, such as heart problems, gall stones or kidney failure, cancer are given instructions for further tests and treatment.

### **What is the impact of a medical camp on a family?**

The impact of a medical camp can go far beyond a checkup or a round of antibiotics. Parents and children learn how to protect themselves from disease, which can influence lives years later. Medical camps also address false beliefs and fears about medicine that often hinder the sick or pregnant from seeking medical help.

### **How does NMM-supported medical ministry strengthen poor communities?**

A healthier family means more time spent at work instead of on sickbeds, more money spent on food and education instead of on medicine, and more hope for the future instead of premature death. Thanks to you, our medical team was able to provide free examinations and prescriptions for thousands of patients who otherwise wouldn't have access to care. Once again a BIG THANK YOU for supporting Grace Hospital and bringing these life-saving and life-changing services to those in need around Northern India.

Yours for the people of India,

Dr. Joy Punnoose

On behalf of Native Missionary Movement

**Medical Staff and the volunteers before they begin the camp**

**12 Camps**

**4850 Patients Treated**

**876 First timers!**

**690 Patients Referred**

**44 referred for cancer  
treatment**

**30 will need surgery**

A special camp was conducted with the help of the GV Gokul Charitable Trust specialising in diagnosing and detecting cancer among rural patients.

This partnership is enabling the cancer patients to be referred to the best treatment facilities available in the region.

Camp held in  
MUGHAL  
BHARA  
village

Two surgery camps have also been conducted in the recent past. Thanks to the generous donations made available, the patients that have been identified in the field camps have been given free surgical help in the Grace Hospital.

**Medical camp during the Annual Convention**

People traveled from far and wide to meet our doctors at the camp and be treated by them!

We were able to care for the infants and older ones, male and female and none was sent back without love, care and a prayer

thank  
you!

FOR MAKING IT POSSIBLE FOR THE THOUSANDS  
TO BE TOUCHED BY THE LOVE OF JESUS

On behalf of the Native Missionary Movement India family, we want to thank you for partnering with us and allowing us to bring healing to countless lives.
